                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           à
                                                                                                                                 Sequence 16, Application US/09362230

Patent No. 6352849

GENERAL IMFORMATION:
APPLICANT: Tischfield, Jay A.
APPLICANT: Tischfield, Jay A.
TITLE OF INVENTION: Sequences and Low Molecular Weight Amino Acid Sequences
TITLE OF INVENTION: Sequences and Low Molecular Weight Amino Acid Sequences
TITLE OF INVENTION: Sequences and Low Molecular Weight Amino Acid Sequences
TITLE OF INVENTION: Sequences Having Internal Ribosome Binding Sites
NUMBER OF SEQUENCES: 44
CORRESPONDENCE ADDRESS:
ADDRESSEE: Russell PA
STREET: 200 East Broward Boulevard
CITY: Fort Lauderdale
STATE: FL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FCT-US94-07926-16/C

Sequence 16, Application PC/TUS9407926

GENERAL INFORMATION:

APPLICANT: 1soffield, Jay A.

APPLICANT: Seilhamer, Jeffrey J.

TITLE OF INVENTION: Mammalian Phospholipase A2 Nucleotide

TITLE OF INVENTION: Sequences and Low Molecular Weight Amino Acid Sequences

TITLE OF INVENTION: Encoded Thereby, Antisense Sequences and Nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

GENERAL INFORMATION:

APPLICANT: Cohen, Daniel

APPLICANT: Chumakov, Ilya

TILE OF INVENTION: Biallelic markers for use in constructing a high density...

FILE REFERENCE: GENSET.020CP1

CURRENT APPLICATION NUMBER: US/09/422,978

CURRENT APPLICATION NUMBER: US 09/298,850

EARLIER PELING DATE: 1999-04-21

SEALLIER APPLICATION NUMBER: US 60/109,732

RABLIER FILING DATE: 1998-11-23

EARLIER FILING DATE: 1998-11-23

GENERAL INFORMATION:
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prever
TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION: AND TREATMENT OF SEQUENCE: 9710-003-999
CURRENT FILING DATE: 1998-11-24
NUMBER OF SEQ ID NOS: 6849
                                                                                                            ö

Sequence 1, Application US/0823136B
Patent No. 5756312
GENERAL INFORMATION:
APPLICANT: Weiner, Amy J.
APPLICANT: Houghton, Michael
TITLE OF INVENTION: Immunoreactive Polypeptide Compositions
NUMBER OF SEQUENCES: 45
CORRESPONDENCE ADDRESS:
ADDRESSEE: Chiron Corporation
STREET: 4560 Horton Street
CITY: Emeryville
STATE: CA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     APPLICANT: Weiner, Amy J.

US-09-046-604-1/c

Sequence 1, Application US/09046604

Patent No. 6303292

GENERAL INFORMATION:

APPLICANT: Weiner, Amy J.

APPLICANT: Weiner, Amy J.

TITLE OF INVENTION: Immunoreactive Polypeptide Compositions

NUMBER OF SEQUENCES: 45

CORRESPONDENCE ADDRESS:

ADDRESSEE: Chiron Corporation

STREET: 4560 Horton Street

CITY: Emeryville
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB 1; Length 20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-09-026-601-28

Sequence 28, Application US/09026601

Patent No. 6358680

GENERAL INFORMATION:

APPLICANT: Beck, James J.

TITLE OF INVENTION: Detection of Wheat and Barley Fungal

TITLE OF INVENTION: Pathogens Using the Polymerase Chain Reaction

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-US-10-180-4)

Sequence 47, Application US/09707780

Patent No. 639308

GENERAL INFORMATION:
APPLICANT: Genslves, Dennis
APPLICANT: Meng, Bacakong
TITLE OF INVENTION: NUCLEIC ACIDS, PROTEINS, AND THEIR USES
TITLE OF INVENTION: NUCLEIC ACIDS, PROTEINS, AND THEIR USES
FILE REFERENCE: 07678/035006
CURRENT APPLICATION NUMBER: 05/09/707,780
CURRENT PILING DATE: 1998-05-19
PRIOR FILING DATE: 1998-05-19
PRIOR FILING DATE: 1998-05-19
PRIOR APPLICATION NUMBER: 60/047,147
PRIOR PILING DATE: 1997-12-17
NUMBER OF SEQ ID NOS: 54
SOFTWARE: FastSEQ for Windows Version 4.0

LENGTH: 17
                                                                                                                                                                                                                                                                                                                                                                           APPLICANT: GORBALOW:

Sequence 83, Application US/09387341

Patent No. 6410323

GENERAL INFORMATION:

APPLICANT: Roberts, Lex M.

TITLE OF INVENTION: Antisense Modulation of Human Rho Family Gene

TITLE OF INVENTION: Antisense Modulation of Human Rho Family Gene

TITLE OF INVENTION: Expression

FILE REFERENCE: 1594-0404

CURRENT APPLICATION NUMBER: 09/156,424

EARLIER APPLICATION NUMBER: 09/156,424

EARLIER APPLICATION NUMBER: 09/156,907

EARLIER APPLICATION NUMBER: 09/156,907

EARLIER PELING DATE: 1998-09-18

EARLIER PELING DATE: 1998-09-18

EARLIER PELING DATE: 1998-09-18

EARLIER FILING DATE: 1998-09-18

EARLIER PLING DATE: 1998-09-18

EARLIER PELING DATE: 1998-09-25

NUMBER: OF SEQ ID NOS: 233

US-08-985-162-722
; Sequence 722. Application US/08985162
; Batent NO. 6057156
; Patent NO. 6057156
; Patent INFORMATION:
; APPLICANT: Achtar, Saghir
; APPLICANT: Achtar, Saghir
; TITLE OF INVENTION: ENZYMATIC NUCLEIC ACID TREATMENT
; TITLE OF INVENTION: OF DISEASES OR CONDITIONS RELATED
; TITLE OF INVENTION: TO LEVELS OF EPIDERMAL GROWTH
; TITLE OF INVENTION: FACTOR RECEPTORS
; NUMBER OF SEQUENCES: 1877
                                                                    GENERAL INFORMATION:

US-09-827-998-617/c

j Sequence 617, Application US/09827998

patent No. 6656700

general information:
    APPLICANT: Gu, Yizhong

APPLICANT: Shannon, Mark

TITLE OF INVENTION: NOVEL ISOFORMS OF HUMAN PREGNANCY-ASSOCIATED PROTEIN E

FILE REPERBRENCE: MDHORDER:
    CURRENT PILING DATE: 2001-04-06

CURRENT FILING DATE: 2001-04-06

PRIOR PAPLICATION NUMBER: US 60/207,456

PRIOR PLING DATE: 2000-05-26

PRIOR PLING DATE: 2000-09-27

NUMBER OF SEQ ID NOS: 1881

SOFTWARE: Aeomica Sequence Listing Engine

SEQ ID NO 617

LENGTH: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     JACKEL INFORMATION:

APPLICANT: GL, Yizhong

APPLICANT: GL, Yizhong

JAPLICANT: GL, Yizhong

APPLICANT: GL, Wizhong

JAPLICANT: GL, WIZHONG

JAPLICANT: SABATOON, Wark

TILE OF INVENTION: NOVEL ISOFORMS OF HUMAN PREGNANCY-ASSOCIATED PROTEIN E

FILE REFERENCE: MDAMORF-8

CURRENT APPLICATION NUMBER: US/09/827,998

CURRENT FILING DATE: 2010-04-06

PRIOR APPLICATION NUMBER: US 60/207,456

Patent No. 6158680

GENERAL INFORMATION:

TITLE OF INVENTION: Detection of Wheat and Barley Fungal

TITLE OF INVENTION: Pathogens Using the Polymerase Chain Reaction
NUMBER OF SEQUENCES: 41

CORRESPONDENCE ADDRESS:
ADDRESSEE: No. 6158680artis Corporation
STREET: 3054 Cornwallis Road
